## In the Claims

Kindly amend the claims to read as follows:

1. (currently amended) A method for establishing an interactive education support system in connection with a student identification database, comprising the steps of:

disseminating gradable material to at least one student for the student to enter gradable information thereon;

collecting the gradable material and determining a grade therefor[e];

entering teacher-generated review data for the student from whom the gradable material was collected directly upon the collected gradable material in a machine-readable format;

capturing and storing an image of the gradable material, including the review data, in an electronic folder associated with a student identification code thereon; and

providing controlled viewing access to the image by authorized viewers.

- 2. (currently amended) The method of claim 1 wherein the step of entering teacher-generated review data further includes entering the review data upon a label having a predetermined data capture format for the review data and affixing the label to the collected gradable material including the steps of locating a label on the gradable material having a predetermined data capture format for review data to be placed thereon and placing review data upon the label.
- 3. (currently amended) The method of claim 1 further including the step of locating affixing a label on the gradable material having at a specified location for the affixation of the student identification code.

- 4. (cancelled)
- 5. (original) The method of claim 2 wherein the review data includes a grade.
- 6. (original) The method of claim 5 wherein the review data capture format accommodates the grade.
- 7. (original) The method of claim 5 wherein the label includes a specified location for the affixation of the student identification code.
- 8. (original) The method of claim 3 or 7 wherein the label includes a pre-printed student identification code.
- 9. (original) The method of claim 1 further including the step of affixing the student identification code on the gradable material.
- 10. (original) The method of claim 1, further including the step of returning the gradable material to the student after the image of the gradable material is stored.
- 11. (original) The method of claim 3 or 7 wherein the identification code is entered on the gradable material after the gradable material is collected.

- 12. (original) The method of claim 1 wherein the step of storing the image in an electronic folder includes a step of scanning the original gradable material to create an electronic image thereof.
- 13. (original) The method of claim 1 wherein the step of providing viewing access is through the Internet.
- 14. (original) The method of claim 1 wherein the grade is placed upon the gradable material in a machine-readable format.
- 15. (original) The method of claim 8 further including the step of placing a captured grade in an electronic grade book or database.
- 16. (original) The method of claim 1 further comprising the step of transferring at least one stored image from the electronic folder to a secondary storage media for dissemination.
  - 17. (original) The method of claim 16 wherein the secondary storage media is a cd.
- 18. (original) The method of claim 17 wherein the transferring step comprises the transfer of a plurality of stored images associated with a particular student identification number.
